

### VOLATILITY AWAKENED IN FEBRUARY AFTER TWO-YEAR HIBERNATION

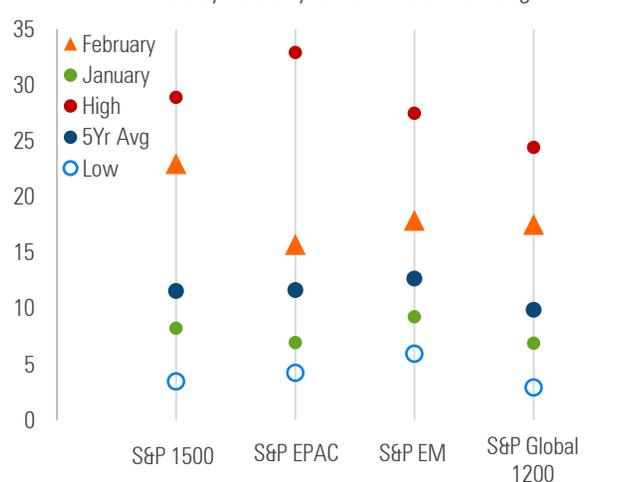

- After 15 consecutive months of positive returns, the global equity market posted its first negative monthly return since October 2016 and its highest monthly volatility since June 2016.
- Up more than 7% ytd into late January, the global equity market quickly changed direction and sold off more than 9% in less than two weeks.
- February saw 12 daily moves in the S&P 500 of at least 1%, already 50% more than 2017's total of eight. In addition to higher realized volatility, the VIX spiked to its highest level since August of 2015.
- The start of February's downturn coincided with two economic data surprises. Larger-than-expected growth in both payrolls and average hourly earnings triggered fears that the Fed would begin to tighten policy at a faster rate than previously expected.
- As is often the case in times of market stress, February's downturn saw correlations across market segments and asset classes push higher.

**MANAGED RISK INVESTING**

- Higher market volatility in February meant that the **S&P 500 Managed Risk Index**, which has an 18% vol cap and no fixed allocation to bonds, reduced its equity allocation for the first time in 18 months. After starting February at a 100% equity allocation, it was reduced down to 60% before finishing the month at 72%.
- Its hedge position helped to limit its participation in both the downturn and the subsequent upturn so that it exhibited less volatility than the S&P 500, but trailed its return by 59 bps for the month.
- Over the last 10 years, the Managed Risk Index has exhibited the same average monthly volatility as a 70/30 blend\*, while generating an average excess monthly return of 20 bps.

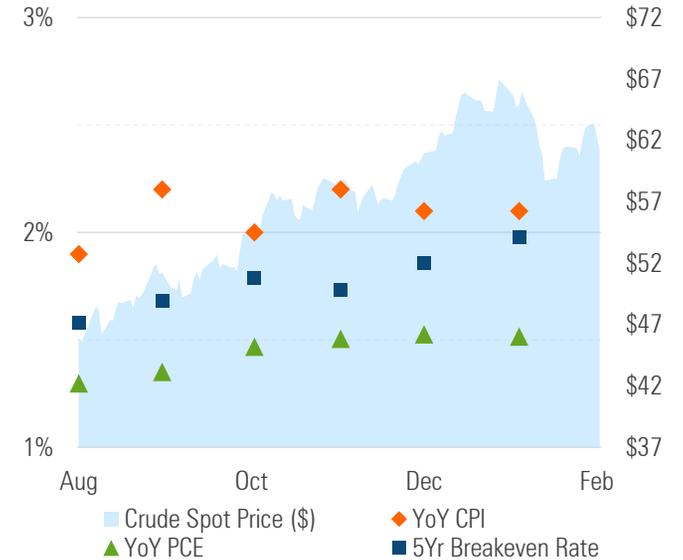

- If early-month hints of higher inflation stoked fear, the mid-month release of actual inflation numbers probably helped to assuage it.
- The price of oil finished the month lower, while year-over-year CPI and PCE were unchanged.
- The US bond market's return was negative for the second month in a row as rates moved higher and credit spreads widened.

\*As measured by the S&P 500 Index and the S&P US Aggregate Bond Index.
